

Solución

Suma y resta las fracciones

$$1) \frac{3}{8} + \frac{7}{8} = \frac{10}{8}$$

$$2) \frac{7}{2} + \frac{8}{2} = \frac{15}{2}$$

$$3) \frac{2}{5} + \frac{2}{6} + \frac{4}{9} = \frac{36+30+40}{90} = \frac{106}{90}$$

$$4) \frac{2}{5} + \frac{7}{2} + \frac{5}{3} = \frac{12+105+50}{30} = \frac{167}{30}$$

$$5) \frac{10}{4} + \frac{7}{3} + \frac{6}{11} = \frac{330+308+72}{132} = \frac{710}{132}$$

Suma y resta las fracciones

$$1) \frac{10}{6} + \frac{7}{6} = \frac{17}{6}$$

$$2) \frac{7}{9} + \frac{6}{9} = \frac{13}{9}$$

$$3) \frac{1}{2} + \frac{7}{9} + \frac{9}{9} = \frac{9+14+18}{18} = \frac{41}{18}$$

$$4) \frac{8}{10} + \frac{5}{2} + \frac{8}{7} = \frac{56+175+80}{70} = \frac{311}{70}$$

$$5) \frac{10}{4} + \frac{9}{3} + \frac{10}{11} = \frac{330+396+120}{132} = \frac{846}{132}$$

Suma y resta las fracciones

$$1) \frac{9}{8} + \frac{5}{8} = \frac{14}{8}$$

$$2) \frac{7}{11} + \frac{8}{11} = \frac{15}{11}$$

$$3) \frac{6}{9} + \frac{8}{11} + \frac{8}{5} = \frac{330+360+792}{495} = \frac{1482}{495}$$

$$4) \frac{5}{10} + \frac{8}{4} + \frac{4}{2} = \frac{10+40+40}{20} = \frac{90}{20}$$

$$5) \frac{1}{11} + \frac{7}{10} + \frac{7}{11} = \frac{10+77+70}{110} = \frac{157}{110}$$

Suma y resta las fracciones

$$1) \frac{1}{3} + \frac{2}{3} = \frac{3}{3}$$

$$2) \frac{5}{2} + \frac{7}{2} = \frac{12}{2}$$

$$3) \frac{5}{3} + \frac{7}{4} + \frac{8}{5} = \frac{100+105+96}{60} = \frac{301}{60}$$

$$4) \frac{7}{5} + \frac{9}{2} + \frac{9}{3} = \frac{42+135+90}{30} = \frac{267}{30}$$

$$5) \frac{7}{3} + \frac{3}{8} + \frac{5}{9} = \frac{168+27+40}{72} = \frac{235}{72}$$

Suma y resta las fracciones

$$1) \frac{8}{3} + \frac{1}{3} = \frac{9}{3}$$

$$2) \frac{4}{10} + \frac{9}{10} = \frac{13}{10}$$

$$3) \frac{4}{5} + \frac{7}{10} + \frac{7}{3} = \frac{24+21+70}{30} = \frac{115}{30}$$

$$4) \frac{5}{7} + \frac{5}{7} + \frac{9}{8} = \frac{40+40+63}{56} = \frac{143}{56}$$

$$5) \frac{7}{3} + \frac{10}{5} + \frac{1}{4} = \frac{140+120+15}{60} = \frac{275}{60}$$
